

Agricultural De-Watering Belt

Food processors use this belt to **wash down fruits and vegetables** before they are packaged. Processors who **pre-package salads, fruits or vegetables** for supermarkets are the primary users of these belts.

The belts are 100% polyester so they track easily, do not stretch, and are not affected by the wet conditions.

Belts are made with chlorine resistant compounds that withstand chemical wash-downs better than traditional PVC and PU reinforcement

Chlorine resistant cleats and vguides can be added to the belts.
